

PROGRAMMING ASSIGNMENT

Instructions

1. Usage of any additional framework for customizations during the process is allowed.
2. Upload the code on github and share the repository for assignment analysis.
3. Error handling should be done properly while writing the code
4. Brownie point for code commenting and scripting the code.

Problem Statement

Scrape the following 2 links and store them in a csv/pickle file for the evaluation

1. Use this [link](#) to scrape the entire recipe details alongwith the details of all the ingredients.
2. Use this [link](#) to scrape all the food items links across all the pages in this dataset.
Change the page numbers using the code directly to scrape the entire UK dataset.

You can come up with your own schema to store the data.

All the best!!
